smartdots

Newsletter no.1 - May 2025

A new software version, SmartDots 4.1, has been released. New features include:

- **Keyboard shortcuts** - A set of predefined actions are now available to be mapped to a key from the keyboard.

- The **Growth graph** has been revamped. It uses a new control and has multiple modes showing.

- **Preloading of images**, Image data can be cleared in the settings menu. When the total storage reaches over 1 GB, a prompt will appear to clear the cache the next time the user closes SmartDots.

- Age reading module - The **column filters** are now enabled on the list of samples (files).

- **API** has been **updated** to support the new software version.

- **ASC 2025 SmartDots booth** (help needed, any one who is going to ASC and is able to help please contact smartdots@ices.dk)

- **ICES Migration to AzureAD**, to enhance security, ICES is transitioning to Azure Active Directory (AzureAD) with multi-factor authentication. Users will receive an invitation. Please note that this change does not affect the software tokens themselves, only the method by which they are accessed.

Best regards
WGSMART
